

BVT-IP

TECHbrief

Wyatt-Badger Venturi Tubes
Insert-Type Composite Primary Elements

FEATURES:

- High Accuracy
- Economical Design
- Low Pressure Loss
- Reliable Performance

Description

The Wyatt-Badger BVT insert venturi is available in two configurations: The standard BVT-IP, made entirely of engineered materials, and the BVT-IL, which uses a metallic throat and mounting flange and a fiberglass reinforced body. The BVT-IP and BVT-IL are designed for insertion within the interior of a pipeline and are secured by adjacent pipe flanges. Wyatt-Badger insert venturis are low-weight and cost effective alternatives to other meter geometries and designs.

Application

The BVT insert venturi design provides higher accuracy over a wider range of flow rates, and lower permanent pressure loss than orifice plates, flow nozzles, or conventional venturi meters. Designed to measure clean liquids and gases in full pipes, the insert BVT can be manufactured to fit virtually any pipe size. In applications where solids contaminate the line fluid, an auxiliary high pressure tap can be provided for installation in the upstream pipe.

Flow Measurement Accuracy

For pipe Reynolds numbers greater than 75 000 and with a normalized piping configuration, the Wyatt-Badger BVT-IP and BVT-IL provide a flow measurement accuracy of $\pm 0.25\%$ with independent flow calibration. Without independent flow calibration, the Wyatt-Badger BVT-IP and BVT-IL provide a flow measurement accuracy of $\pm 0.50\%$.

Technical Specifications

Accuracy

For pipe Reynolds numbers greater than 75 000 and a normalized piping configuration, the Wyatt-Badger BVT-IP and BVT-IL provide a flow measurement uncertainty of:

- ± 0.50% for standard meters and
- ± 0.25% for flow calibrated meters.

Pressure Loss

The permanent pressure loss of Wyatt-Badger insert meters is considerably lower than that of short-form venturis, and for most beta ratios, lower than that of long-form venturis as well. (See Figure 1)

Figure 1

Beta Ratio

Wyatt-Badger insert meters can be furnished in a wide range diameter ratios (d/D), providing accurate and reliable primary elements with low permanent pressure loss.

Temperature Range

The composite design insert BVT series of primary devices is designed to operate within process temperature range of 0 °F to +300 °F (-18 °C to +150 °C).

Pressure Range/Flange Connections

Depending on process conditions, the standard design BVT-IP can operate at pressures up to 750 PSIG (5175 kPaG). The BVT-IL, due to its metallic mounting flange, operates at pressures up to 4000 PSIG (27 500 kPaG).

Piping Requirements

Designed for full-pipe flow, BVT-IP and BVT-IL insert meters can be installed in horizontal or vertical lines. For recommended upstream piping, refer to Wyatt Engineering TechSpec for the BVT.

Design Concepts

The hydraulic design produces discharge coefficients that are highly predictable and independent of line size. The Wyatt-Badger design allows accurate calculation of expansibility factors that are necessary for compressible fluid flow measurement. The smooth transition section minimizes flow noise and erosion.

Signal-to-Noise Ratio

Within the specified flow range and piping conditions, the Wyatt-Badger design will produce signal-to-noise ratios greater than 98%. This level of performance is essential for sensitive process control and reactive rate-of-flow control applications.

BVT-IP Sizing Table

Inlet Diameter		Throat Diameter		Beta Ratio	Overall Length		Outlet Diameter		ΔP= Differential Pressure of 100' wc (24.864 kPa)

This sizing table can be used as a guide to aid the user in choosing the proper insert BVT for a given application and reflects the most commonly-used sizes. Other sizes and special geometries are available, often at no additional cost. Depending on the details of your application, a more appropriate selection, or a more accurate estimation of the performance of a given selection, may be available. Wyatt Engineering encourages users to contact their local Wyatt-Badger representatives, or call us directly, for definitive sizing information.

Incompressible Flow Relationships:

$$\Delta P_N = 100 (Q_N / Q)^2$$

$$\Delta H_N = \Delta H (Q_N / Q)^{1.88}$$

Examples:

For a 20.00" x 13.813" BVT-IP or BVT-IL, find

$$\Delta P_{at} \text{ at } 20,000 \text{ USGPM}$$

$$\Delta H_{at} \text{ at } 20,000 \text{ USGPM}$$

Solutions:

Found using the "Incompressible Flow Relationships"

$$\Delta P_N = 100 (20,000 / 11,549.08)^2 = 299.89" \text{ wc}$$

$$\Delta H_N = 3.3 (20,000 / 11,549.08)^{1.88} = 9.3" \text{ wc}$$

$$Q_N = Q(\Delta P / 100)^{0.5}$$

Q_N at 750" wc

$$Q_N = 11\,549.08 (750 / 100)^{0.5} = 31\,628.46 \text{ USGPM}$$

Available Options

Materials of Construction

The Wyatt-Badger insert series of flow meters can be constructed of virtually any composite material, such as vinyl ester or isophthalic resin, reinforced with fiberglass or carbon fiber. Consult Wyatt Engineering for available materials.

Model BVT-IP: In the BVT-IP series, the body is typically constructed of vinyl ester resin reinforced with fiberglass (40% by weight). The throat can be constructed of polyvinyl chloride, FRP, or almost any other synthetic material.

Model BVT-IL: Like the BVT-IP, the meter body of the BVT-IL is generally constructed of vinyl ester resin reinforced with fiberglass (40% by weight). The BVT-IL typically incorporates a bronze, 304 stainless steel, or 316 stainless steel throat. Consult Wyatt Engineering for other available throat materials.

BVT-IL

Consult your local representative or Wyatt Engineering for information on other materials of construction.
